Your safe is now ready to protect your valuables. For additional instructions a full Use & Care Manual can be downloaded from our website www.libertysafe.com/ownersmanual.php. If you experienced a problem, you can consult the troubleshooting guide within the Use & Care Manual online. For additional online help visit www.libertysafe.com/services.php or contact customer service by phone (800) 247-5625. Support is available Mon-Fri, 8:00am to 5:00pm Mountain Standard Time. You will need your safe serial number when contacting customer service about your safe.

LOST COMBINATION OR KEYS

The lock on your safe has been set with a randomly selected combination at the time of manufacturing. As part of our continuing service, a record of your combination by serial number is kept on file. To help us better serve you, please contact Customer Support at (800) 247-5625 when you change your combination or code. If you lose your combination, you can retrieve a copy for a $25.00 research fee, provided you have not changed it from the original combination. You must complete certain security and documentation requirements. If you lose your keys you can obtain duplicate for $5.00 each key, plus $5.00 shipping and handling.
Go to **www.libertysafe.com** to download a combination/duplicate key request form.

Removing the cable deprives the Securam unit of power. Wait a bit and then start pushing the hole with paperclip to further deplete any power that is there. Then hold the button with the paperclip and then plug front unit back into internal unit.
1 7 135 16.3K

Not K @NotK_US · 15h
Once you have done that, the Securam will be reset back to Factory Setting. The Manager Code should be now 1-1-1-1-1-1-1 and the user code should be 1-2-3-4-5-6.
2 9 156 16.3K

Not K @NotK_US · 15h
To change ANY CODE
Use 0-0-0-0-0-0 to start the reset process and it beeps once
Input either manager or user code and it then beeps once
Input new manager or user code and it then beeps once
To test new password, input new code and it beeps twice
3 6 168 16.3K

Not K @NotK_US · 15h
If you need a video from Securam to explain this, please go to

The Management Reset code (MRC) is a 7 digit code. The 2 numbers in the MRC that are separated by a "/" or are in "[ ]" have to be entered simultaneously – press both numbers at the same time.

Execute the MRC sequence using the following steps:
1. Press * 6 #
2. Now enter the MRC
3. After entering the MRC, press #

You will hear 1 beep for each time the MRC has been executed. (If this is the first time that the MRC has been executed, you will hear only 1 beep.)

EX: *6# 135 0/1 87 #

The Master Code has now been reset to the Factory Default of 123456#
Enter the Master Code 123456#, and the lock will open.

Applicable to:
6120, 6123, Z02 Locks

Massively Popular Safe Locks Have Secret Backdoor Codes

Senator Ron Wyden has found that the DoD banned the use of such locks for U.S. government systems, but deliberately kept information about the backdoors from the public.

JOSEPH COX · MAR 13, 2024 AT 9:00 AM

The documentation also explicitly says that sometimes the existence of a manager code may not be sent to an actual user of the device. "In some instances the Manager Code and associated Operating Instructions are not issued to the End User," it reads, meaning that people may be using these locks without understanding that they can include a backdoor code.

Government and Law Enforcement Requests. S&G policy is to comply with all lawful requests served *directly* on S&G by government agencies and law enforcement pursuant to a lawfully executed and proper warrant, subpoena or court order. S&G will only provide information in response to such lawful requests with a showing of probable cause, or when provided with Consumer or Customer consent, as applicable. S&G carefully reviews all such requests to ensure that there is a valid legal basis for each request, including consulting with legal counsel as appropriate. Once confirmed, S&G complies with legally valid requests. Where S&G determines that there is no valid legal basis or where a request is considered to be unclear, inappropriate or overly broad, S&G will object, challenge or reject the request.

A SCREENSHOT OF S&G'S DATA POLICY.

Deviant Ollam, an information security professional who says they have used backdoor lock codes as part of their work, told 404 Media in an email that "While the security landscape consists of a myriad of competing incentives and policy seldom comes in one-size-fits-all statements, I do think that the end users of any security product—whether hardware or software—should be fully aware of any backdoors, override codes, or routes of access which may exist in addition to their user key or code." This is so the users can weigh up the various factors, and potential downfalls and benefits, of a backdoor themselves.

They said they've used the codes as a safe technician offering lockout support to customers, as well as in their "covert entry work." Information security professionals often perform physical penetration tests on businesses to survey a client's defenses. "Contacting manufacturers with the serial number of a target's safe in order to be sent the code for a small fee has saved me time and effort during penetration engagements," they added.

"It is safe to say that the majority of electronic safe locks marketed to home consumers and small businesses contain one or more type of backdoor code," they continued. Sometimes these are disclosed to users, "but the overwhelming

The HIonorable Michael C. Casey
Director
National Counterintelligence and Security Center
LX/ICC-B
Washington, DC 20511

Dear Mr. Casey:

I write to urge the National Counterintelligence and Security Center (NCSC) to warn American businesses about the counterintelligence risks posed by commercial safe locks that do not meet U.S. government security standards.

Many commercially available safes include electronic locks that can also be unlocked using special codes set by and known only to the manufacturer. The existence of these "manufacturer reset" or "management reset" codes is not prominently advertised to consumers, nor the fact that lock manufacturers receive demands from government agencies for those codes. These backdoor codes can be exploited by foreign adversaries to steal sensitive information that U.S. businesses store in safes, such as trade secrets and other intellectual property.

The Department of Defense (DoD), which is responsible for overseeing the standards for locks and safes used to store sensitive and classified U.S. government information, informed my office by email on November 8, 2023, that manufacturer reset codes pose a security threat and, consequently, are prohibited in the locks approved for U.S. government use. DoD also provided my staff with the attached white paper on December 15, 2023, revealing that U.S. government standards for approved locks do not explicitly reference these backdoor codes in order to avoid tipping off the public to their existence. In short, the government has opted to keep the public in the dark about this vulnerability, after quietly protecting government agencies from it.

It would be one thing if these backdoors were only available to U.S. government agencies, but they are not. China-based SECURAM Systems is one of the largest manufacturers of electronic safe locks sold in the U.S. Although DoD has informed my office that the company's products are not approved for U.S. government use, its low-cost products have enabled the firm to dominate the consumer-focused portion of the market. Technical documents published on the company's website confirm that its products include manufacturer reset codes, and also indicate that in some cases, consumers may not be told about the existence of these codes. As a China-

headquartered company, SECURAM is of course obligated to follow Chinese law, including the requirement to cooperate with secret demands for surveillance assistance. Consequently, SECURAM could be forced to share codes with the Chinese government that would enable surreptitious or clandestine access to the safes used by U.S. businesses.

SECURAM's primary U.S.-based competitor, Sargent and Greenleaf (S&G), has confirmed that many of its products include manufacturer reset codes, and that it can be forced to turn over those, both to the government and to civil litigants. The company provided my office with its written policy governing such disclosures, which is also attached. But of course, those codes are also a juicy target for hacking or espionage. Indeed, that is why the only S&G products that are approved to store U.S. government secrets do not feature such backdoor codes.

The NCSC plays an important role in warning U.S. businesses about the espionage threat posed by foreign spies. But U.S. businesses cannot protect their valuable intellectual property, and consequently, America's global economic edge, from foreign espionage if they are kept in the dark about vulnerabilities in the safe locks they use. To that end, I urge the NCSC to update its public educational materials to recommend that businesses upgrade their safe locks to those that meet U.S. government security standards.

Thank you for your attention to this important matter. If you have any questions about this request, please contact Chris Soghoian in my office.

Sincerely,

Ron Wyden

Sargent & Greenleaf, Inc.

Security Device Access and Legal Process Policy

General Information. Sargent & Greenleaf, Inc. ("S&G") designs, manufactures, and markets locks and other security devices and mechanisms ("Security Devices"). S&G sells its products to manufacturers that incorporate Security Devices into a wide range of products, including traditional safes for documents and valuables, firearm safes, ATM safes and lock boxes. S&G also sells products through distributors who in turn sell to locksmiths and in some cases individuals (collectively, these manufacturers, distributors, and individuals are "S&G Customers" or "Customers"). Individual consumers are usually customers of S&G Customers ("Consumers") and may possess a Security Device as a result of purchasing a Customer's product into which a Security Device has been installed by the S&G Customer.

Security Device Access Information. It is S&G policy that any access to or methods by which to operate any Security Devices installed in Customer products takes place solely at the discretion of S&G Customers and pursuant to any agreements between S&G Customers and any Consumers.

- S&G does not possess any Consumer's individual access code for any Security Device installed on a Customer product owned or possessed by that same Consumer.
- S&G does not maintain a manifest of which individual Consumers own products fitted with its Security Devices.

Certain Security Devices are designed with manufacturer override/reset codes as a means to assist Consumers and their family members if the security code is lost.

Government and Law Enforcement Requests. S&G policy is to comply with all lawful requests served *directly* on S&G by government agencies and law enforcement pursuant to a lawfully executed and proper warrant, subpoena or court order. S&G will only provide information in response to such lawful requests with a showing of probable cause, or when provided with Consumer or Customer consent, as applicable. S&G carefully reviews all such requests to ensure that there is a valid legal basis for each request, including consulting with legal counsel as appropriate. Once confirmed, S&G complies with legally valid requests. Where S&G determines that there is no valid legal basis or where a request is considered to be unclear, inappropriate or overly broad, S&G will object, challenge or reject the request.

Private Party Requests. For private party requests, S&G complies with the laws pertaining to such requests, subject to the terms and conditions of any Customer contract, any executed subpoena or court order, and applicable law.

Customer Notice. S&G will request that its Customer notify the end use Consumer when access to the S&G Security Device is being sought in response to legal process from government, law enforcement, or third parties, except where providing notice is explicitly prohibited by the legal process itself, by a court order S&G receives, by applicable law or where S&G, in its sole discretion, believes that providing notice creates a risk of injury or death to an identifiable individual, or where notice is not applicable to the underlying facts of the case.

Contact and Requests. Any questions regarding S&G's practices in this area can be directed to S&G at support@sargentandgreenleaf.com. Any requests for information can be formally served on S&G at S&G's corporate office located at One Security Drive, Nicholasville, Kentucky 40356.

Sushi Rice

Sushi Rice in an InstantPot (I do not use "rice mode")

1. I like to start with Sekka brand (look for the pink bag with blossoms)
2. Two cups rice into instant pot vessel
3. Wash rice, draining repeatedly until water is clear enough to start seeing the rice below surface
4. Now you have two cups of damp rice… so pour in two cups of water
5. Seal lid and low pressure cook for 14 minutes, without "keep warm" enabled
6. Allow pressure to release naturally (the pin will fall back down eventually)
7. On the side, combine 1/8 cup rice vinegar, 1/8 cup mirin, 2 tsp salt, 2 tsp sugar
   (some people opt to nuke it a sec and stir them together)
8. Open instant pot, fluff rice, allow to cool for 5 or 10 minutes if you can
   (remove vessel from Instant Pot housing, give it a cool place to stand)
9. With rice still slightly warm but not hot, fold in your vinegar/mirin/salt/sugar mixture
   (Chop and fold technique prevents larger clumps and gloopy rice)
   (Wooden paddle can help to manage moisture)
