Knowing Which Key to Use

Knowing Which Key to Use

The FEO-K1 Key

ASME A17.1 (2007): Safety Code for Elevators & Escalators

2.27.8 Switch Keys

The key switches required by 2.27.2 through 2.27.5 for all elevators in a building shall be operable by the same key. The keys shall be Group 3 Security (see 8.1). There shall be a key for each switch provided. These keys shall be kept on the premises in a location readily accessible to firefighters and emergency personnel, but not where they are available to the public.

This key shall be of a tubular, 7 pin, style 137 construction and shall have a biting code of 6143521. The key shall be coded "FEO-K1."

The possession of the "FEO-K1" key shall be limited to elevator personnel, emergency personnel, and elevator equipment manufacturers. Where provided, a lock box, including its lock and other components, shall conform to the requirements of UL 1037 (see Part 9).

NOTE (2.27.8): Local authorities may specify additional requirements for a uniform keyed lock box and its location to contain the necessary keys.

Don't Mess with Elevators if You're an Idiot

"The Colorado Springs Fire Department (CSFD) confirms that it responded to a call for service Friday, July 29 to perform an elevator rescue for approximately ten people trapped inside an elevator, including Presidential Nominee Donald Trump. A fire truck arrived at The Mining Exchange--A Wyndham Hotel & Spa, 8 South Nevada Avenue, Colorado Springs, Colo and found the elevator stuck between the first and second floors. The firefighters were able to secure the elevator, open the top elevator hatch, lower a ladder into the elevator which allowed all individuals to self evacuate, including Mr. Trump, onto the second floor lobby area. No injuries were reported."

Denver7 requested emails between the Colorado Springs Fire Department, UCCS and the Trump campaign. We received 214 pages of email, including one from Colorado Springs Fire Marshal Brett Lacey responding to a friend who had reached out to him after Trump's visit. This quote, taken directly from that email, detailed what really happened inside the elevator.

"Thanks for the support... it was funny. You have likely heard more about the elevator fiasco. Turns out someone (Secret Service or his entourage) had an elevator bypass key.. they (one of them) turned it off between floors and didn't know how to get it back on.. our folks went and fished them out... elevator guys get there and say what the crap? Who turned this off? Turned it back on and voila."

A Trump campaign spokesperson had no comment on this new detail.

Pocket-Cut-Up - Tubular Key Cutter

Description Additional Info Reviews Tags

The **Pocket Cut-Up™ (TKM-90)** is a compact, portable tubular key machine. It is factory preset to cut standard size center sequence **tubular keys** by code.

Offset left and offset right sequence (including dead pin cuts) can be cut with one simple adjustment. It also cuts most Greenwald style tubular keys.

The tubular key blank is held firmly in place by the swing-away key holding fixture, that locks the depth adjustment knob at pre-selected depths. By turning the cutter knob, brass or steel key blanks are cut with ease. The Pocket Cut-Up™ is so incredibly lightweight and compact that it can be carried in your pocket.
