Door locks compatibility

Projects

JustVibing 14d

I have an xNT implant, and I've done some projects with Arduino, but now I want to use it as a key to my door, do you guys know some good locks that are still compatible with the xNT, I know that some of the Samsung ones were patched, and I am really afraid of buying one and simply don't work, here in brazil the locks are REALLY expensive.

And also, I would appreciate it if you guys teach me how to know if a lock is compatible, I mean, not all NFC 13.56mhz lock readers are compatible, are they?

RFID Hacking by Ic... | # unknown-tags

martinjavens 03/27/2021
when no data is shown, that means there is no data? or is it output to a file, say when I do if sniff there is nothing visible

```
h This help  
f <filename> Load data from ID1 file
```

Examples:
if hitag cc # if hitag-challenges
[hit] pm3 --> if hitag info
[hit] pm3 --> if hitag info
[hit] pm1 -->

oh no if our rfid system is based on a hitag HTRC10 chip, and the software does not support hitag 1, that means we're out of luck?
shoot

here's block diagram of our system, and idt proxmark does Hitag1 (asked)

March 1, 2021

martinjavens 03/09/2021
Htrc1001=Hitag1, that's why it's not being picked up by Proxmark?

iceman 03/09/2021
you could try the if hitag reader -h to see if H1 command works...

QUESTIONS AND CONCERNS FROM HACKERS

DIFFERENT CHIPS, DIFFERENT PRODUCTS

MAKING SENSE OF DIFFERENT CHIPS AND PRODUCTS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

FlexNT is an antenna designed by ClearCo using this inlay. Used to be used in rings, etc. But performance is better when flat.

DangerousThings bought them in bulk from NFCRing and did the encapsulation. Very robust but large. Can go in a middle finger, etc. (Blade and dermal elevator)

TWO OFTEN-CONFUSED TERMS

“RFID... THAT’S LIKE THE SAME THING AS NFC, RIGHT?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

VENN DIAGRAM TIME

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Remember, to be RFID all a system needs is...

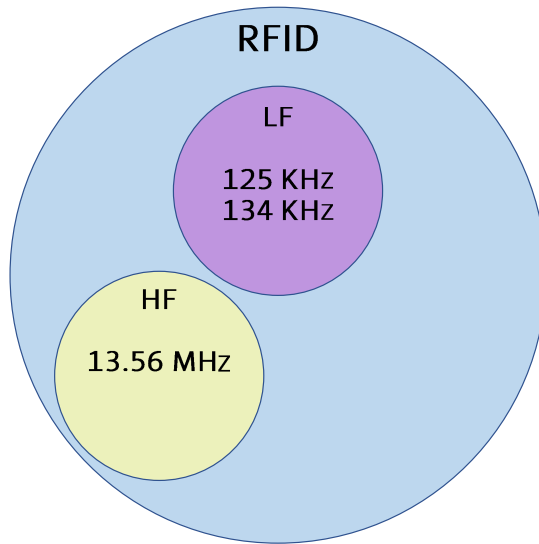

1. Device
2. Reader
3. Antennas and Inductive Coupling To Communicate

Explain what is meant by “credential type” here... it’s both the RFID coupling technology *AND THE FEATURE SET ON THE CHIP*

COMMON CREDENTIAL TYPES (THERE ARE QUITE A FEW)

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Explain what is meant by “credential type” here... it’s both the RFID coupling technology *AND THE FEATURE SET ON THE CHIP*

THAT'S A LOT OF CREDENTIAL TYPES!
HOW DO I CHOOSE THE RIGHT ONE?

“I WANT TO DO ALL THE THINGS!”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Fortunately, it's not necessary go out and get a dozen implants all over your body, hah. But more power to you if you want to. =)

“I WANT TO DO ALL THE THINGS!”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We can simplify the landscape considerably. Let's re-make those two Venn Diagram circles.

LET'S TALK LOW FREQUENCY FIRST...

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We've collapsed the Low Frequency side of things to a single name

T5555 is the same as "Q5" a.k.a. Temic

Temic had their T5551, T5552, T5553, T5554, T5555 and T5557 family.

The others are all T55x7, and the entire family is generally called "T55xx" (as are the proxmark commands, many of which have switches in case someone is using an old Q5 chip)

Atmel T5577, Temic Q5, and EM4x05 / EM4x50 tags can all be used to mimic LF credentials

T55xx is stable and EM4x05/4x50 is experimental today. HID uses EM for their ISOproxII

Link to 0xFFFF 's T55xx block calculator

“WOW... DID THEY MAKE THESE FOR HACKERS?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

“WOW... DID THEY MAKE THESE FOR HACKERS?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

No... SOME CREDENTIAL TYPES ARE JUST VERY OLD

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

(HID acquired Indala from Motorola in 2003)

No... SOME CREDENTIAL TYPES ARE JUST VERY OLD

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

(HID acquired Indala from Motorola in 2003)

WHAT CAN I DO WITH IT?

“I PUT THAT CHIP IN ITS PLACE... NOW WHATCHA GOIN’ *DO WITH IT*”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Now the BIG question

LOW FREQUENCY: xEM – ATMEL T5577

xEM – ATMEL T5577

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

\$49

Accessing your office or gym or vehicle gate

LOW FREQUENCY: xEM – ATMEL T5577

xEM – ATMEL T5577

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

\$49

Accessing your office or gym or vehicle gate

(some readers will be fussier than others... it depends a lot on coil size with the antennas and also orientation, position, etc. You may have to play a little bit)

LOW FREQUENCY: XEM – ATMEL T5577

XEM – ATMEL T5577

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Sometimes offices have objected

Potential solution: ask about getting an **additional** credential, as opposed to **duplicating** one

LOW FREQUENCY: xEM – ATMEL T5577

xEM – ATMEL T5577

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

\$49

"xEM access controller"

low freq reader (EM mode only)

coil antenna is on a coax... so you can place it somewhere

white wire outputs 12 volts

HOW DO I CONFIGURE IT?

PROGRAMMING: PROXMARK3

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Hands-down, the best tool with the greatest functionality

Stock antenna can be iffy, sadly

PROGRAMMING: PROXMARK3

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

My friend Naomi did a video about RFID cloning and she showed the proxmark3, as well

PROGRAMMING: PROXMARK3

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

My friend Naomi did a video about RFID cloning and she showed the proxmark3, as well

PROGRAMMING: CHEAPER CLONER TOOLS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

She showed some of the other tools on the market for working with RFID tags, as well

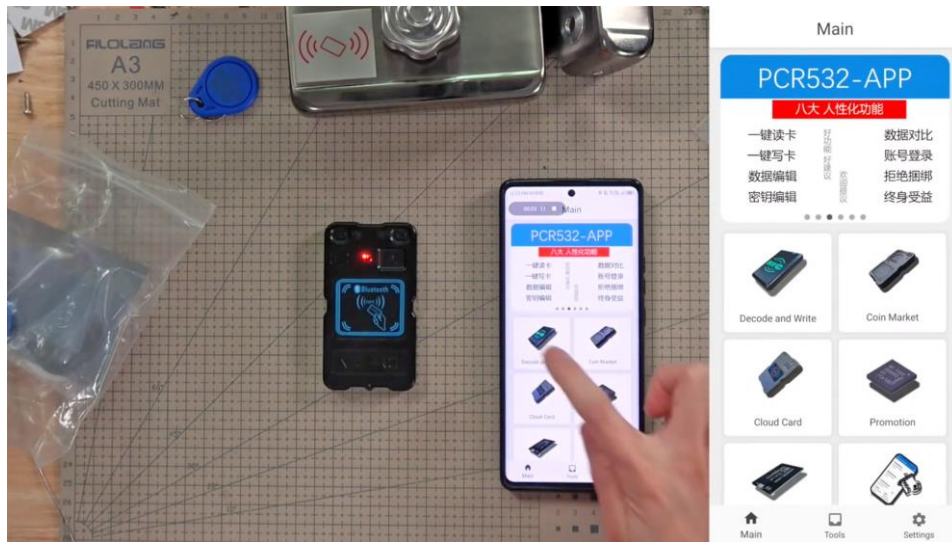

PROGRAMMING: CHEAPER CLONER TOOLS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

NFC Tool

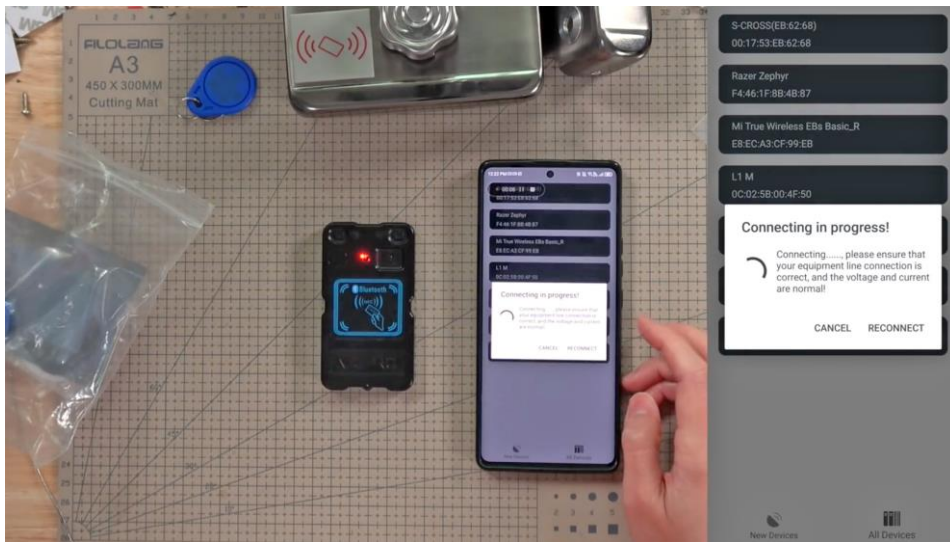

PROGRAMMING: CHEAPER CLONER TOOLS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Using the NFC Tool... kind of janky, but she can make it work on unencrypted tags

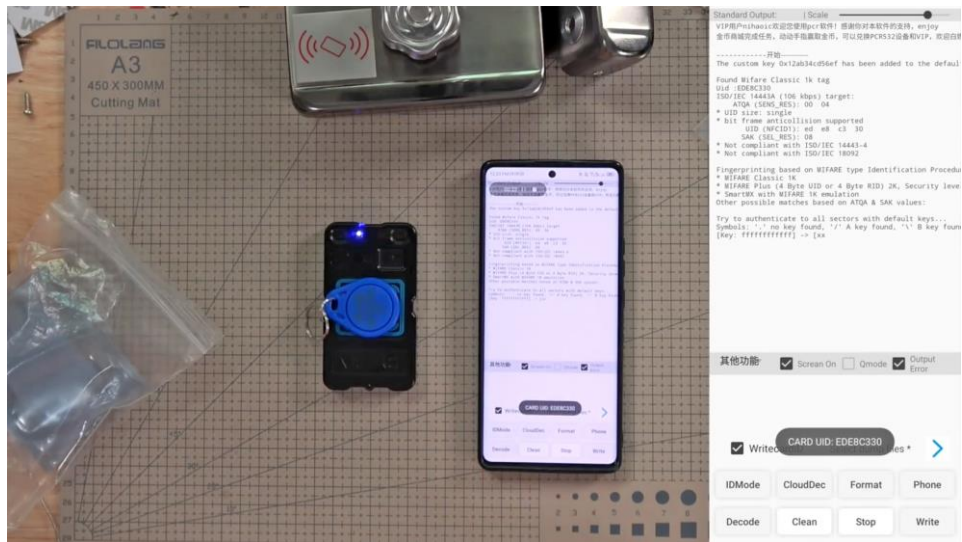

PROGRAMMING: CHEAPER CLONER TOOLS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Using the NFC Tool... kind of janky, but she can make it work on unencrypted tags

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Yeah... they support password protection.

And many cheap cloners, for whatever reason, like to set this bit and set their own password

PROGRAMMING: HANDHELD CHEAP CLONERS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We've had that happen to some folk. It's happened to me, as well. Quite the "oh shit" moment. =)

I had to defuckulate mine, and we also had to do the same for some folk at a DEF CON event in NYC

It's a shame, though, because they have good antennas. Not PERFECT antennas, however

THE KEYSY HAS A SIMILAR TENDENCY

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Other products like the Keysy cloner also like to password protect chips

ANOTHER PROBLEM WITH PROGRAMMING

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Tearing Protection

ANOTHER PROBLEM WITH PROGRAMMING

I haven't changed the contents of my nfc tag since my gf last set it.

I miss seeing her weekly... and letting her leave love notes on my tag...

having someone you know and trust leave you notes... literally inside you... Is... so sweet and personal.

I love you too darling...

xSLX

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

\$59

A rare Type 5 NFC

13.56MHz ISO15693 & NFC Type 5

(ICODE SLIX2 ... helpful for some devices that require Type 5. padlock, pistol case)

SO WHO OR WHAT IS VIVOKEY?

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

started with a smartcard chip, Apex, and focus on payment features and the like but put on indefinite hold

then it became an identity platform, which is now the Spark2.

(the Spark1 was around but then Google broke their NFC stack and phones couldn't work with the Spark1 for a few years)

HIGH FREQUENCY IMPLANTS: VIVOKEY SPARK 2

VIVOKEY SPARK 2

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

\$109

Type 4 NFC (non-user-changeable CSN/UID) FIPS 197 compliant

Like other NFC tags... it can pass a URL to a service, etc

VivoKey service platform - OpenIDConnect (like "login with Facebook")

- Wordpress

- Discords/Forum

- vault service (like 1Password/Tresorit/etc)

if you root your phone - possible to do lock/unlock but that feature isn't going to be the norm in future on stock OSs

HIGH FREQUENCY IMPLANTS: VIVOKEY SPARK 2

VIVOKEY SPARK 2

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Spark2 is a symmetric crypto challenge response validation system. There's an API, you can interact with the chip, etc.

SparkActions is a redirector service. Every Spark has a hard-set URL that's unique and interacts with their servers through the API.

SAML identity provider integration... so, sign into GoogleWorkspace, Octa, 1Login, etc.

Spark is NTAG424, very small, 2mm x 12mm injectable. Cryptographic proof of identity. "Unlock my laptop" or "Unlock my phone" may be projects in the works, but they would require the API being online

“CAN I USE THIS TO UNLOCK MY PHONE?!?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Common question: “Can I use this to unlock my phone?”

People love the idea of a phone that will only unlock if it’s in your own hand (I love this idea, too)

Sadly we’re not quite there. Closest we can come is integration with wearables, etc.

"NFC SmartLock" on Google was removed a while ago. Wasn't all that smart, just read the UID, and might have interfered with GooglePay so that's likely why they removed it.

HIGH FREQUENCY IMPLANTS: VIVOKEY APEX

VIVOKEY APEX

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Replacing the Spark

Partnered with Fidesmo

Collaboration with VISA, Mastercard, etc.

PEGLEG PROJECT

PEGLEG: RASPBERRY PI IMPLANTED BELOW THE SKIN (NOT COMING TO A STORE NEAR YOU)

by: Brian McEvoy

17 Comments

f y t

August 29, 2019

Earlier this month, a group of biohackers installed two Raspberry Pis in their legs. While that sounds like the bleeding edge, these computers were already part of a project called PegLeg. I was fortunate enough to see both versions in the flesh, so to speak. The first version was scarily large — a motherboard donated by a well-router roughly the size of an Altoids tin. It's a reminder that the line between technology's cutting edge and bleeding edge is moving ever onward and this one was firmly on the bleeding edge.

How does that line end up moving? Sometimes it's just a matter of what intelligent people can accomplish in a long week. Back in May, during a three-day biohacker convention called GenHack, someone said something along the lines of, "Wouldn't it be cool if..." Anyone who has spent an hour in a maker space or hacker convention knows how those conversations go. Rather than ending with a laugh, things progressed at a fever pitch.

The router shed all non-vital components. USB ports: ground off. Plastic case: recycled. Battery: repurposed. Amazon's fastest delivery brought a Qi

DIY WATCH CREDENTIAL

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Jakub from Czech Republic

"I have extracted the chip itself from a key fob I got on Ebay for like 2 €. The coil antenna is underneath the PCB, wrapped around the display, and trust me it was very difficult to make the 12ish turns exactly the right width to fit inside the casing, I had to do it like a hundred times because it always was a millimeter too wide or too narrow. Soldering the terminals was also a lot of fun but not as difficult as the previous part. Hope this information makes your presentation even more interesting than it already is."

DIY RFID RING

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Someone dissolved their RFID badge in acetone to get the antenna coil and the chip, and they 3D printed a small wearable “ring” into which they incorporated that silicone and copper

The next generation of implant are already in the works and there are significant inroads happening with integration across other systems
Based on SmartMX ... one of NXP's latest chips (it's what HID uses in their SEOS product line of credentials, BTW)

NXP SmartMX3 P71 (JCOP4)

<https://www.vivokey.com/apex>

As of right now... some transit systems are checking to see if cards respond to "Magic" backdoor commands, and if they do, the system will disable that credential.
(Hence the ladders and walls game with new generations of "Magic" card)

THIS IS *NOT* THE FUTURE I WANT TO EXPERIENCE

Amazon introduces the Amazon One, a way to pay with your palm when entering stores

Sarah Perez @sarahintampa / 6:59 am PDT • September 29, 2020

Comment

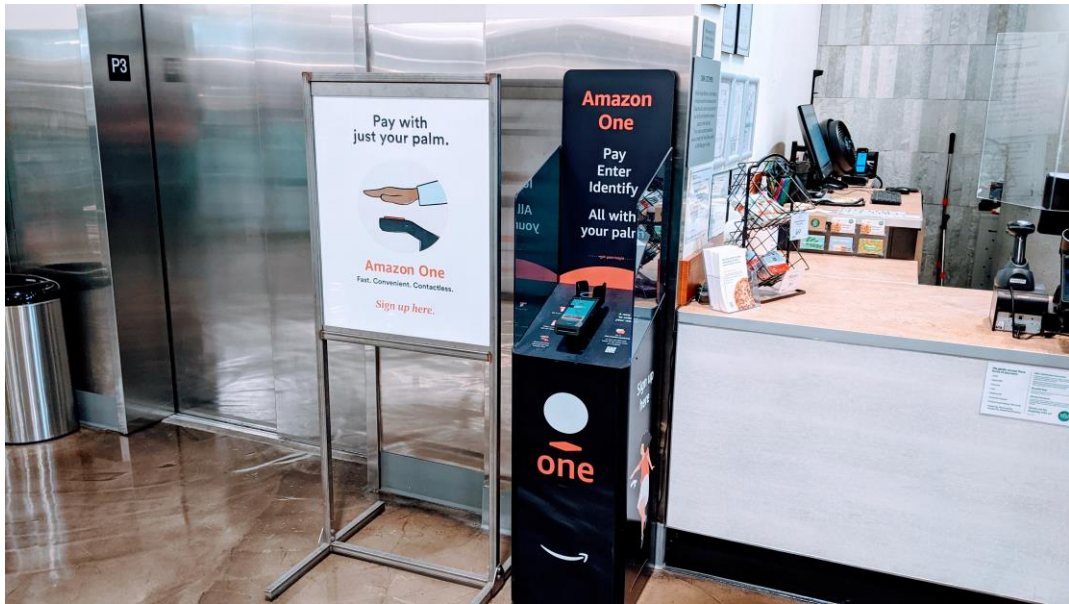

Image Credits: Amazon

In the middle of a pandemic when customers are often wearing plastic gloves to stores alongside their face masks, Amazon's physical retail team is introducing a new biometric device that will allow shoppers to pay at Amazon Go stores using their palm. The company on Tuesday introduced its purportedly "contactless" Amazon One, a scanner of sorts where you'll first insert your credit card, then hover your palm over the device to

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

This is amazon (or any other retailer with a similar plan) taking biometric data from the user. Implants are not biometric... implants are controlled by the user and they are changeable.

CUSTOM IMPLANTS AS A SERVICE

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

customer often does acetone dissolve themselves
share photos, see if it's chip on board (COB) with plates that get in the way, or MOB
package chips (MOB is a term from NXP)

\$200 for "conversion"

- take cred
- pull chip
- test resonance
- test with BNA
- test performance before encapsulation
- encapsulate
- antenna shape is maximum width of 8mm at the widest (little black bowtie)
- allows for use of 4 gauge needle
- comes with fully gas plasma sterilized needle (low temp, doesn't harm the bio polymer) and lube, etc... all the things a professional would need
- (50% refund if it fails)
- (bulk rates at 22 units)

COMMON QUESTIONS AND CONCERNS

“DOES IT HURT?”

Juneau who's a better Alaskan than Sarah Palin

@Jun34u_sec

DHA Biohacker: "And they didn't give me ANY ANESTHESIA when I got these implants in!"

Me: "Oh, just like an IUD"

8:51 PM · Apr 6, 2022 · Twitter for Android

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We do plenty of things that hurt... Most folk would say that it's compatible to a piercing, etc. But ask others who've had it done.

“CAN I USE THEM RIGHT AWAY?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

It's common for the insertion point to swell slightly. This isn't a sign of a problem, it's just the body healing. The swelling can cause extra "distance" between the coil and any reader so for the first few days you might experience intermittent read/write difficulty. (This is less of an issue if you have a ferrite core antenna and an LF credential.)

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Implantable RFID transponders have tested as compatible with MRI machines up to 7 Tesla field strength

But **magnetic** implants are **incompatible** with MRI machines and procedures

Think about it... long before humans did this, we've had pet chips. So there has been lots of testing both in field trials and clinical trials.

Non-ferrous, and data is found to still be readable and with good integrity.

There is **SOME** metal in these devices, however, which can cause artifacts in images acquired. If an implant is close to the region being imaged, the diagnosis may be compromised.

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Deviant's friend Kara. Was having some trouble with balance and walking, eventually taking a hard fall.

Went in for consultation, they wanted to do an MRI. Question of whether she could go through the machine.... Because of implants in her hands.

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

DANGEROUS THINGS

MRI Compatibility of x-series transponders

Patients with a Dangerous Things x-series microtransponder may safely undergo MRI diagnostics in cylindrical systems up to 7-Tesla.

INSTRUCTIONS FOR PATIENTS UNDERGOING MRI:

- The patient should be monitored continuously throughout the MRI procedure using visual and audio means (e.g., video monitor with intercom link).
- Instruct the patient to alert the MR system operator of any unusual sensations or problems so that, if necessary, the MR system operator can immediately terminate the procedure.
- Provide the patient with a means to alert the MR system operator of any unusual sensations or problems.
- Do not perform MRI if the patient is sedated, anesthetized, confused or otherwise unable to communicate with the MR system operator.
- The presence of metal in the device is certain to cause artefacts in the images acquired, so if the device is close to the region being imaged, the diagnosis may be compromised. Removal of the device will be required if artefacts affect diagnostics.

CLINICAL TRIALS AND STUDIES:

The ability to read patient identification microchips relies on the use of radiofrequency pulses. Since radiofrequency pulses also form an integral part of the magnetic resonance imaging (MRI) process, the possibility of loss of microchip function during MRI scanning is of concern. Previous clinical trials have shown microchip function to be unaffected by MR imaging using a field strength of 1 Tesla and 1.5. As veterinary MRI scanners range widely in field strength, a study¹ was devised to determine whether exposure to lower or higher field strengths than 1 Tesla would affect the function of different types of microchip. In this phantom study, a total of 300 International Standards Organization (ISO)-approved microchips (100 each of three different types: ISO FDX-B 1.4 × 9 mm, ISO FDX-B 2.12 × 12 mm, ISO HDX 3.8 × 23 mm) were tested in a low field (0.5) and a high field scanner (3.0 Tesla). A total of 50 microchips of each type were tested in each scanner. The phantom was composed of a fluid-filled freezer pack onto which a plastic pillow and a cardboard strip with affixed microchips were positioned. Following an MRI scan protocol simulating a head study, all of the microchips were accurately readable. Neither 0.5 nor 3 Tesla imaging affected microchip function in this study.

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

They were satisfied and she was put in the imaging machine. Upon exit, her doctors were like, “OK, so we’re going to admit you.”

“Admit me to a regimen of care? Admit me for monitoring?” she asked. “No, I mean admit you for surgery. Now,” they said... practically while scrubbing in.

After the surgery, they told her about the scar tissue, the pressure against her spinal cord, and what a close call this was

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

As opposed to a lifetime of dizziness, pain, and likely becoming a paraplegic... this is her being discharged from the hospital a few weeks after her emergency surgery

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

She still currently walks with a cane while continuing physical therapy... but she's alive.

She dodged possibly not being able to walk ever again or possibly dramatically shortening her life because she was able to get that MRI that day.

“ARE THESE SAFE DURING MEDICAL PROCEDURES?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Amal's work and his kindness to put that document online -- publicly and for free so that anyone who needed this information could have it -- saved her

("take the time to write that blog entry or make that forum post or publish that proof-of-concept or submit to some hacker con CFP now... because you never know whose life your shared knowledge is going to impact years later")

“HOW DURABLE ARE THESE?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Bioglass (a variant of standard soda-lime glass as opposed to borosilicate glass, etc)

elicits the body collagenizing response

does not have biobond like animal tags

(causes inflammatory response -- cancer studies by antis -- and restricts removal)

CyberizeMe/BiohackMe -- makers of Firefly -- implants use flame-sealed process
(particulates all around the glass, forms a terrible tension point)

Dangerous Things -- implants use laser-sealed process

“HOW DURABLE ARE THESE?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

bashNinja had a MIFARE chip stop working. These have been buggy for some folk, so he had it removed.

This is what was discovered...

“HOW DURABLE ARE THESE?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

...hairline fracture. Could this have caused the failure? Maybe. Could this have happened in his hand? Doubtful. More than likely, this was pre-insertion.

Dangerous Things is inspecting things and checking out QA measures, etc. (unfortunately, no super easy way to inspect an implant before administering it)

Out of many thousands of implants, this is the only one we've ever heard of like this.

“HOW SECURE ARE THESE?”

ONE CREDENTIAL, UNIVERSAL IDENTIFICATION

Secure. Interoperable. Open.

ALL ACCESS CREDENTIALS

In a perfect world, your smart access card should seamlessly and securely read on your door access readers, your locks, and your logical access readers. LEAF is providing the tools to make such concepts a reality.

Your user's credentials are their keys to everything they need and want to do with their identities in one package.

SECURITY THROUGH STANDARDS

The commercial security industry, as a whole, from technology providers to end-users, is demanding more product interoperability, security, and functionality. LEAF was created by industry members to simplify the integration of legacy, current, and future technologies.

LEAF is combining the best security protocols and ISO standards with the most advanced technologies to provide a complete specification for interoperable solutions.

LEAF pledges to continue its quest to ensure compatibility in security.

LEAF ENABLED PRODUCTS

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

There are efforts being made to push for more standards, especially as far as access control is concerned

The LEAF standard has the most promise here

“CAN I REMOVE IT?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Per Deviant’s friend Josh who removed a faulty xM1:

“It was mostly the case of making an incision at one of the short edges and giving it a 'ramp' to slide out of. Then, with some pressure, push it out of the opening enough to grab with tweezers or to make it completely fall out. I'd recommend some topical anesthetic. It wasn't an overall bad or unpleasant experience. Comparable to an x-Series install. Healing time wasn't too bad; the same for any cut given that it's only a small incision, after all.”

“CAN I REMOVE IT?”

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Other people have removed theirs over the years, mostly to upgrade to newer ones. Yes, it is possible.

QUESTIONS AND CONCERNS FROM *NON-HACKERS*

WE DID THIS VIDEO. IT WAS FUN.

The image shows a screenshot of a YouTube video player. The video title is "Getting an RFID Implant" by "The Modern Rogue". The video shows four men in a workshop setting. One man in a blue shirt is holding up a small object, possibly the RFID implant, while the others look on. The background features a chalkboard with technical drawings and a table with various tools and equipment.

So it's easy (terribly easy, as it turns out) to simply dismiss these folk all as scientifically-illiterate nutters and bible thumpers.

But we should recognize that there are people out there who are genuinely in pain every day because of mental difficulties... and these technologies -- and the conspiracy fantasies surrounding them -- feed their fears and delusions, while the internet helps them connect with one another and reinforce their misguidedness

Mind Games: The Tortured Lives of ‘Targeted Individuals’

Thousands of people think that the government is using implanted chips and electronic beams to control their minds. They are desperate to prove they aren't delusional.

EVERY MORNING, LIZIA wakes up and remembers that she's been tortured. When she looks down at her hands, she can see slightly raised bumps where she believes she's been implanted with microchips. She is certain that the chips track her every move, that her family has been programmed not to listen to her. She knows that her mind had been pushed to the limits of human endurance ("the most pain you could put on a person before they die"). The targeting, the rewiring of her brain, is so extreme that she can no longer even cry.

Lizia is 56, a thin, wiry woman with elf-like ears and bright eyes, an artist who grew up in the Rocky Mountains. She worked at Microsoft for 10 years and started her own web development company with her partner before the electronic attacks, the stalking, and the surveillance began. She knew it had to be some form of technology attacking her—she'd worked in the technology industry for more than a decade. She knew what it was capable of.

When she sought help, a hospital committed her to a 10-day hold in the mental ward, teaching her how to calm her racing heart without addressing the technology that Lizia

Forty-four percent of Republicans think Bill Gates wants to use coronavirus vaccine to microchip them: poll

By BRIAN NIEMIETZ
NEW YORK DAILY NEWS | MAY 22, 2020 | 3:51 PM

Bill Gates, a noted philanthropist, is up to no good in the eyes of 44% of Republicans in a new poll.(LUDOVIC MARRIAP)

Hold onto your tin foil hats.

A [poll](#) taken this week found 44% of Republicans think Bill Gates is working on a coronavirus vaccine because he wants to plant a microchip in them and monitor their movements.

Yahoo News and YouGov found nearly half of Republicans believe that baseless conspiracy theory and may be resistant to using a vaccine that could end the pandemic. The poll also found that 19% of Democrats believe that story is credible while 52% know it is false. Only 26% of Republicans surveyed were certain the Microsoft founder is not hatching such a plot.

HACKERS FIGHT SNAKE OIL

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We do this on the floor at RSA

We do this in our communities

We can help here, too... but not with harsh criticism

HACKERS FIGHT SNAKE OIL

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

While this in-your-face approach is appropriate and effective in fights against big entities, that is not exactly the landscape here

HELP THOSE WHO NEED HELP

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Fred Rogers spoke of how the most vulnerable among us have “deep feelings” even if they seem immature

When they face crisis, Fred offered “a plea not to leave them isolated... And at the mercy of their own feelings and their own fantasies of loss and destruction.”

Striving to understand and better respond... That's a most important task

HELP THOSE WHO NEED HELP

So you think you've been implanted against your will?

DT Info FAQs

Hello,

You're likely here because you have a problem. You're experiencing one or more of the following:

- hearing voices and noises that others cannot hear
- you're gripped with an constant feeling of being watched
- seeing flashes or visual phenomenon others cannot see
- belief that your thoughts are not your own

If that describes you, please read on. Somehow, you come to believe that you have been implanted with some kind of electronics which are engaging in mind control, mind reading, tracking, stalking, or some form of electronic harassment. This post will attempt to explain why your online research efforts have lead you to nothing but more questions... or worse, being misled by charlatans and scammers who intend to take your money, doing nothing for you, and leave you broke while continuing to experience these problems, which often only get worse over time.

Our founder [Amal Graafstra](#) first implanted an RFID transponder into each of his hands in 2005. Since then he's been engaged in development of this technology, and is acutely aware of transponder technology, brain/computer neural interface technologies, and has a good grasp on what the current state of the art is capable of, and what it is not. **Below is his open letter to you and others suffering from these phenomenon.**

The first thing I want to say to you is, "You're not crazy". The second thing I want to say to you is, "You don't have a chip implant". I have been developing chip implant technology since 2005. I know what it is capable of, and what it is not capable of. Let me explain what has happened to you, and why it has nothing to do with chip implants.

Amal did loads of amazing emotional work in this write-up

"Humans have evolved to imagine the future, they just haven't evolved yet to believe it."

HELP THOSE WHO NEED HELP

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

We live in an increasingly connected yet also increasingly isolated society

President Johnson asked of our society and new technologies “how will we use our miracles?”

HELP THOSE WHO NEED HELP

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

People without access to proper safety nets slip through the cracks and can have their lives fall apart

HELP THOSE WHO NEED HELP

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

Destigmatize counseling and mental healthcare... and demand that legislators make costs no longer a barrier

HELP THOSE WHO NEED HELP

[HTTPS://REDTEAMALLIANCE.COM](https://redteamalliance.com)

If you have the time and the spoons for it, do outreach in your communities and simply among your friends and families. People with good ties and healthy relationships are more likely to get help with delusions and they are far less susceptible to becoming swept up in internet conspiracy fantasies or bilked by scam “solutions” from charlatans

It’s similar to how you have to deal with family members and loved ones who are regular consumers of outlets like Fox News...

1. *You have to deactivate their amygdala*
2. *Finding common ground through questions about shared values*
3. *Act like you don’t understand and ask them to explain*
4. *Eventually, ask about what the motivations could be for alleged boogeymen “How would that strategy work?” “How would they go about doing that?” “How would that play out... what kind of laws and policies would it take?”*

Be good to one another and be close to those who matter to you

THANK YOU VERY MUCH!
